PROJECTS

Past To Present (P2P)

- Developed a software system for PICT students to share books, drafting materials, and stationery items within the college community.
- The proposed system will be useful for xyz to offer best solution for particular problem in the abc domain. Depending on generated conclusion, suitable action will be taken and notified to product developers and stakeholders.

The Learning Roadmaps

- A platform that allows students to explore through different coding skills along with this the platform provides a neat placement Statistics report of the top companies to the students.
- The website serves as a centralized hub for the students to access essential course materials, stay informed about various technical and core subject related questions which we are providing in the form of quiz inside the practice section of the website.

Movie Recommender System

- Developed a robust movie recommender system using Python and machine learning techniques. The system recommends the top 5 movies based on similarities to the user's search query, utilizing advanced algorithms to analyze and compare movie features.
